

Using science and technology to create fertilizer for a healthier & more sustainable future.

Our patented Dual Chelation Technology delivers highly efficient nutrient formulations to Horticulture, Viticulture and Broadacre farming systems. With our technology partners, we research and develop break-through formulations that enhance product quality, the productivity of farming systems, and the return on investment for growers.

We developed our technology to optimise yield potential in a wide range of Cereal, Canola and Legume crops with easy-to-use formulations that have excellent compatibilities with an array of crop protection products.

For more information about our range of Broadacre products please contact our **NSW Regional Technical Manager Michael Coote** by phone on **0419 218 699** or by email **michael.coote@dualchelate.com**.
